He's had an explosive career

Jay Chase '62

Jay Chase '62 has always liked to blow up things. He remembers, as a teen, heating propellants for toy rockets on the stove in Salem. One day, he started a fire that ruined the kitchen cabinets.

"There were globs of burning propellant everywhere. ... and I didn't even get punished," Chase said.

Maybe his parents had a premonition that such experimentation would launch their son's career in explosives.

Chase survived with all his fingers and toes and studied physics at Linfield. He fondly remembers working at the Linfield Research Institute, which he says "made it all possible."

Graduation came four and a half years after the Russians' Sputnik satellite blasted the U.S. into technology fever. Research centers were "scurrying for anyone," Chase says, and Lawrence Livermore National Laboratory (then called the Rad Lab) in California hired him right out of college.

Chase worked there for three and a half years, then earned a Ph.D. in theoretical solid state physics at Iowa State University in 1970. He returned to Livermore and worked there until "retiring" in 2000. He designed and tested nuclear explosive systems, led multimillion-dollar technical projects and managed the explosives development program.

Consulting on explosives and counter-terrorism now keeps him busy. But he dreams of building a private lab where he can blow things up.

Research results in 140 U.S. patents for chemist

Bruce Welch '67

Bruce Welch '67 discovered just the career for his inventive personality.

Although now retired, Welch is the inventor or co-inventor on nearly 140 United States patents. In addition, many patents related to these U.S. patents have been issued in other countries. During his 31-year career at the Research and Development Center in Bartlesville, Okla., he worked in turn for Phillips Petroleum Company, ChevronPhillips Chemical Company and ConocoPhillips.

To honor his efforts, his photo sculpted in glass resides in the ConocoPhillips museum.

Welch credits his success, in part, to Hayden Pitman, former Linfield physics professor, and his explorations as a student.

"It was always exciting to go into the lab in the morning knowing that today might be the day that Mother Nature would let me in on one of her many secrets," he said.

After earning a chemistry degree from Linfield, Welch married Claire Zinter '68 and entered graduate school before being drafted into the Army. He received two Purple Hearts during his service in Vietnam, and returned to the United States to complete his Ph.D. from the University of Utah in 1974.

With an inorganic chemistry degree in hand, Welch joined Phillips Petroleum Company and set to work with catalysts. He explained that polyethylene molecules are manufactured by using catalysts to attach several thousand ethylene molecules together in a chain structure.

Welch developed a process to produce resins commonly found in products such as large plastic containers, kayaks and more. He also developed a catalyst used in a process to convert ethylene to propylene, which is used in refineries around the world. His work with German scientists at the University of Bayreuth led to the invention of a polyethylene resin, mPACT, now sold by ChevronPhillips.

"I hope that the results of my research, in some small way, have advanced man's ability to use chemistry to enhance life and will have a positive effect on generations to come," Welch said.

Jamie (Taylor) Kendellen '04 of Bend passed the CPA exam. She and her husband have a daughter.

Alma Sproul '04 of Forest Grove is an assistant athletic trainer at Pacific University. She completed her master's in exercise and sport science at Oregon State University in June.
