1989 OREGON VINEYARD REPORT

ISSUED
BY OREGON
AGRICULTURAL
STATISTICS SERVICE
PORTLAND, OR 97204

January 19, 1990
(Corrected, Table 8
January 29, 1990)

OREGON WINE GRAPE PRODUCTION DOWN

Total 1989 production of wine grapes in Oregon decreased 4 percent from a year earlier, to 7,450 tons. Harvested area, at 3,400 acres, remained the same as in 1988 but yield per acre declined 0.09 tons to 2.19 tons per acre. The Columbia Basin and Douglas County were the areas showing the largest decreases in yield with drops of 47 percent and 39 percent respectively. These areas were the hardest hit by the early February 1989 freeze. All parts of the Willamette Valley reported higher yields in 1989 except Lane and Linn counties.

Total acreage planted to wine grapes in Oregon increased 6 percent to 5,247 acres. The Rogue Valley, the South Willamette Valley and Yamhill County led the way with, respectively 14 percent, 13 percent and 12 percent more acres in 1989 than in 1988. There were 367 newly planted acres in the State during 1989. The number of Oregon vineyards also increased from 310 in 1988 to 320 operations in 1989.

Of the dozen leading varieties in Oregon, White Riesling had the highest yield per acre in 1989 at 3.07 tons per acre. The lowest yield was 1.38 tons per acre reported for Pinot Gris. The major three varieties remain: Pinot Noir with 2,118 tons produced in 1989; White Riesling with 1,944 tons; and Chardonnay with 1,822 tons. Together these three varieties accounted for 79 percent of the 1989 tonnage, 77 percent of harvested acreage and 72 percent of total acreage.

Yamhill was Oregon's leading wine grape county producing 2,330 tons from 807 harvested acres in

1989. Polk was the second leading county with 1,430 tons produced from 705 harvested acres. Washington County ranked third, harvesting 621 acres which produced 1,387 tons. Morrow County slipped to fourth, after leading the counties in production for 1988, because severe frost damage caused harvested area to decrease 44 percent and yields on the remaining acres to drop 52 percent.

Prices strengthened dramatically for the 1989 crop as the average value came to \$760 per ton or 25 percent more than in 1988. All of the twelve leading varieties showed price increases over the previous season. As a result of the good price year, the value of production was up 20 percent to 5.66 million dollars.

Estate winery and home use (2,253 tons) plus sales within Oregon (4,513 tons) accounted for 91 percent of 1989 wine grape production. Sales to Washington totaled 505 tons, to California 153 tons and to other states or foreign countries 26 tons.

The Oregon Agricultural Statistics Service, in cooperation with the Oregon Wine Advisory Board, the Oregon Winegrowers Association and the Oregon Department of Agriculture published this report. The results of this survey will also appear in the USDA report, Noncitrus Fruits and Nuts, 1989 Summary, on January 19, 1990. A report on the 1989 winery crush in Oregon will be released early in March.

Funding for the 1989 wine grape surveys was provided by the Oregon Wine Advisory Board.
