Galloway's research focuses on toxic pollutants in the air

Melissa Galloway '06 found herself on the teaching side of the chemistry podium at Linfield College.

A visiting professor at Reed College, Galloway returned to Linfield to speak with students. Her research is focused on toxic materials that affect air quality and may affect human health.

"Trees naturally emit organic compounds as protection mechanisms," Galloway explained. One of these compounds is glyoxal, which is not harmful by itself. However, it can mix with other compounds and adversely affect air quality and human health.

Galloway's research focuses on the reaction of glyoxal with aerosol particles, which are more prominent in polluted areas but exist throughout the atmosphere. She discovered that when glyoxal reacts with aerosol particles, they mix to form

a dark brown color that can actually soak up the energy from light in the atmosphere causing a warming affect.

"If this dark color is produced in the atmosphere, it can contribute to climate change," Galloway said. The reactions have consequences on human health as well, and can create breathing problems for people who suffer from asthma, respiratory disease or weakened respiratory systems.

Atmospheric chemistry is a field for the determined scientist – trial and error is inevitable, so persistence is crucial.

"The best part about chemistry is that often you fail over and over and then suddenly, it works," she said. "Those successes can sometimes be things you never expected to find."

Galloway chose Linfield because she knew a small, liberal arts college was the perfect fit for her. The personal attention of the chemistry faculty helped her to discover her career.

"I wanted to be a name, not just a number," she said.

Oregon history signs get TLC from alumnus

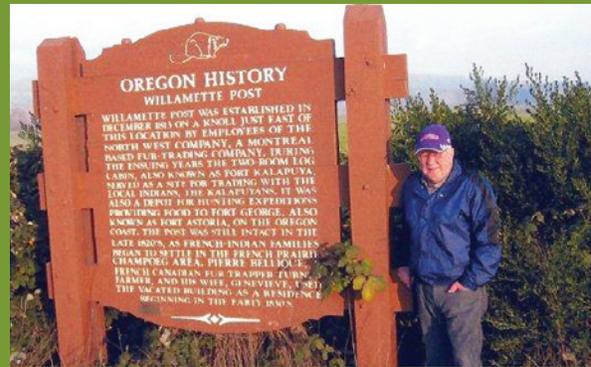

History buff Wayne Sharp '59 is in his element. Sharp leads a six-person volunteer crew that restores state of Oregon historical markers. Of Oregon's 106 signs, Sharp's group has rebuilt or restored more than 60 in the past 16 years.

Sharp said each marker details stories of early Oregon settlers. "They left a legacy through their stories of adventures, discoveries, hardships, prosperity and simple daily life," he said. "We have learned a bundle of history by working on these signs."

Many of the markers were built by the Oregon Department of Transportation in the 1940s, '50s and '60s. They are now under the jurisdiction of Oregon Travel Experience, for which Sharp volunteers.

The sturdy signs are made from native Port Orford cedar, but Oregon weather takes its toll. That's where Sharp comes in, traveling around the state to clean routed letters, repair damaged wood, repaint facings or completely replace deteriorated signs. The paint color is aptly named Historical Marker Brown.

"I've been all over the state, to every darn corner there is a sign," said Sharp, who served in the Korean War before earning

a business administration degree from Linfield. "Some of them on the coast we've already restored twice."

One of Sharp's most unusual projects occurred while repairing a sign near St. Paul which had been damaged from an explosive. The crew found a small black box nestled in the sign. "We thought it might be another bomb, so we pulled stakes in one big hurry. It turned out to be a geocache location," he said. "We couldn't get out of there quick enough." — Laura Davis

Giving for the future

"Linfield College has always held an important place in our hearts. We chose to include Linfield in our will so that we can help maintain Linfield's greatest qualities into the future. The feeling that we can make a difference is most satisfying and it is a privilege to share."

John and Judy (Jandrey) Hubbard, '62 and '63
