Traditional Medicine and Health Care in Peru

Summer student/faculty collaborative research

Sam Gauksheim

Goals

- Evaluate the EsSalud complementary medicine program, specifically the phyto-therapy component
- Explore options for establishing a supply chain from the mountains to the clinic on the coast
- Support collaboration between traditional healers and conventional health providers
- Community Outreach

Círculos de Salud

- Health promotion and education
- Nutrition and group exercise
- Promotores de salud
- Maintain demonstration garden of medicinal plants

History of the project

- Community garden at Chan Chan in 2009
- Comunidad Campesina Juan Velasco Alvarado
- Work in 2012
  - Demonstration Garden at EsSalud
  - Assessment of Huamachucro project and botany work
  - Study of patient attitudes and knowledge of traditional herbal therapy
- Findings

Benefits

- Holistic approach
- Centralized care
- Community outreach
- Personalized Plan
- Low cost
- Reduced dependence on pharmaceuticals

Main Recommendations of EsSalud CAMEC Assessment

- Research: Formalize a collaborative research and publishing relationship with UNT.
- Education and Outreach: Cooperate with the Ministry of Culture’s Chan Chan site museum in developing a docent program for their demonstration garden.
- Supply Chain: Develop a sustainable bio-agronomy medicinal plant garden run by the Comunidad Campesina Juan Velasco Alvarado to supply the Natural Pharmacy at EsSalud-CAMEC in Trujillo.
- Curandero Interface: Build on a long-standing Trujillo tradition of collaboration between practitioners of modern medicine and Traditional Medicine in phyto-therapy, ethnobotany, pharmacy, psychology and community outreach.
